

Recipe

(Continued from Page 5)

½ C. millet.

The slivered almonds I bought looked too big to me, so I put them in my food processor and chopped them up a bit.

These also made about 30 cookies and they were very good.

(Editor's note: *These were taste-tested at Roundtable and excellent!*)

This recipe is from Erika Williams, and is another delicious treat

Chocolate chip Mandelbrot (I think Mandelbrot is German, not that it matters)

1 1/2 sticks of butter

1 C sugar

3 eggs (large)

1C. white rice flour

1 C. cornstarch

1 C. tapioca starch & 1TBS of potato flour (not potato starch)

3 tsp xanthan gum

2 tsp baking powder

1 tsp vanilla

½ tsp almond extract

1 to 1 ½ cups chocolate chips nuts (optional)

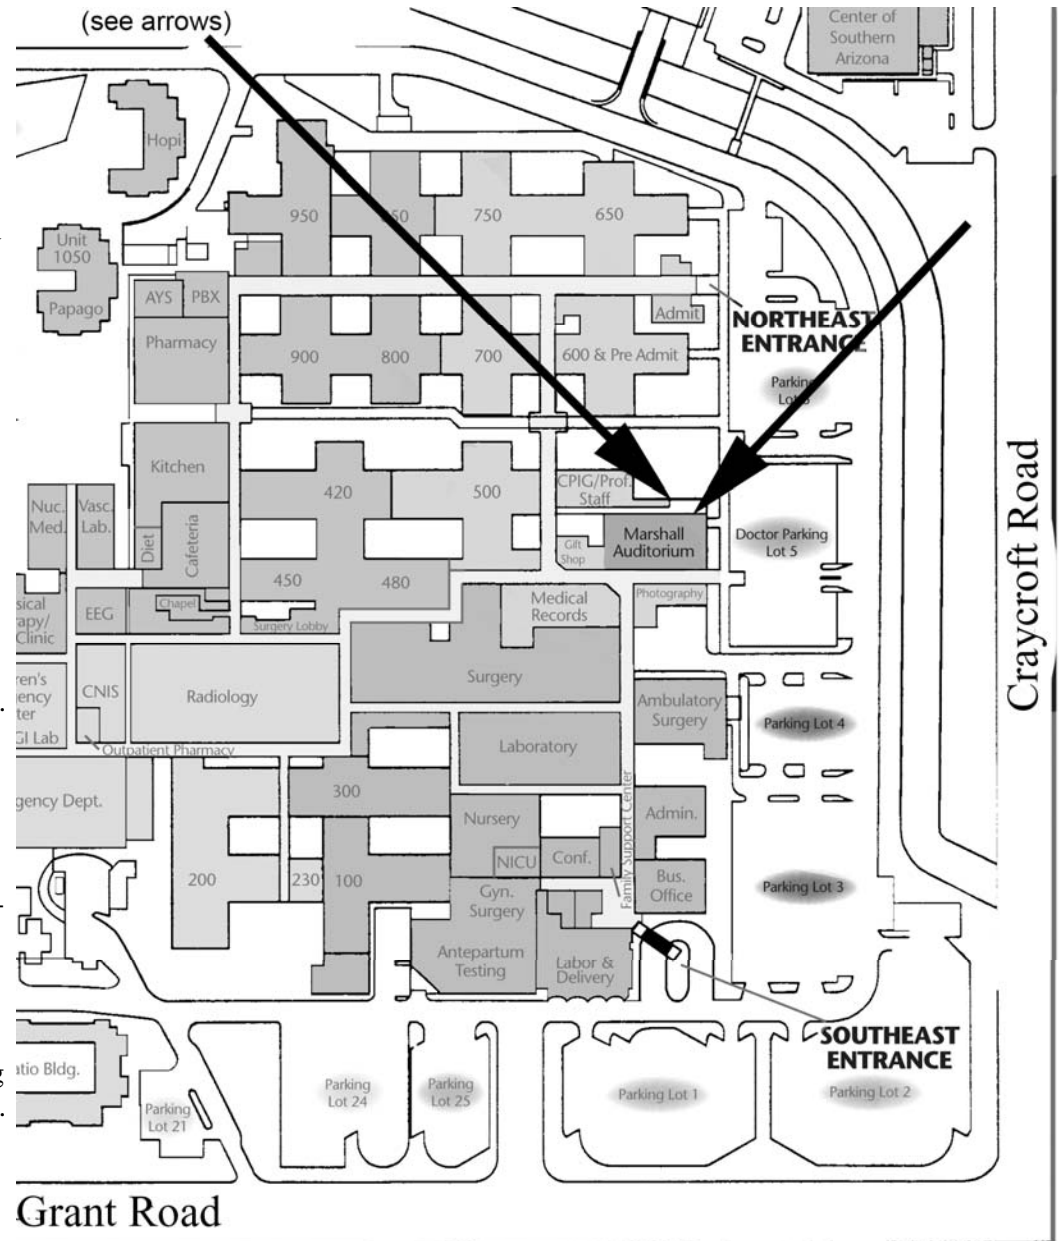

cinnamon sugar for sprinkling on the top

Mix dry ingredients together Cream butter and sugar; add eggs and continue beating, add vanilla and almond and chocolate chips and nuts.

Onto ungreased parchment-paper lined cookie sheet, spoon into 2 equal oval shaped loaves. Leave about 2-3 inches between the two loaves as they will spread while baking. Top loaves generously with cinnamon sugar.

Bake at 350F for 30 minutes.

TMC's Marshall Auditorium is the location of the November 13 SACS general meeting, 9 a.m.

PillCam

(Continued from Page 2)

found, the physician can tell the surgeon exactly where it is located. Or, if intestinal damage is spotty or intermittent – as is often the case with CD – the doctor knows the true extent of the damage.

Many doctors will only order the PillCam© as a test of last resort because of the time required to process the information generated. According to an interview with Kent Katz, M.D., a gastroenterologist in Casper, WY, the physician has to watch eight hours of excruciatingly boring videotape. According to Dr. Katz, the PillCam© will sometimes be 'stuck' in one section of the intestine for 20 minutes, snapping away at the same old landscape. Then, without warning, it can slide down six inches, so rapidly that it only takes three photos. Since the HMO's will only give him \$50 for analyzing the images, he is understandably not very enthusiastic about the test.

According to Given's latest press release, they have introduced new software that will make 'reading' the images much more accurate and efficient for the physicians.
